EDUCATION

Indraprastha Institute of Information Technology Delhi

B.Tech in Computer Science with Design

New Delhi, Delhi

Aug. 2023 – May 2027

Greenway Modern Senior Secondary School

Class XII – Central Board of Secondary Education

Dilshad Garden, Delhi

April 2021 – March 2022

Greenway Modern Senior Secondary School

Class X – Central Board of Secondary Education

Dilshad Garden, Delhi

April 2019 – March 2020

PROJECTS

Lab Inventory Management System | *React, Node.js, PostgreSQL, Prisma* | [GitHub](#)

Jan. 2026 – May 2026

- Built a full-stack web application for IIIT Delhi's CIPD lab to manage 200+ equipment items, reducing manual tracking time by significant amount, deployed live at lab-mgmt.iiitd.edu.in.
- Engineered a complete request lifecycle workflow (Pending → Approved → Issued → Returned) with role-based admin controls, real-time in app notifications, and inventory quantity tracking across all state transitions.
- Deployed on an institute Linux server using Nginx as a reverse proxy and PM2 for process management, ensuring zero-downtime restarts and persistent uptime across sessions.

AI Tutor for Dyslexic Students | *Python, HTML, CSS, JavaScript* | [GitHub](#)

Feb. 2025 – Apr. 2025

- Developed an interactive AI-powered website to assist dyslexic kids in reading, writing, speaking, and comprehension.
- Provided personalized learning experiences using gamification and multi-sensory techniques.
- Implemented progress tracking with adaptive difficulty levels based on individual student performance.

Airport Management System | *React, Flask, PostgreSQL* | [GitHub](#)

Jan. 2025 – Apr. 2025

- Built a full-stack Airport Management System with role-based dashboards for Admin, Manager, Employee, and Customer using React and Flask REST APIs.
- Designed a normalized PostgreSQL schema with 11 entities including triggers, composite keys, and cascading constraints; populated with realistic seed data.
- Implemented CRUD operations, JWT-style login with role-based routing, and dynamic sidebar UIs with responsive CSS for all four user portals.

Angry Birds Game | *Java, LibGDX, JUnit* | [GitHub](#)

Sep. 2024 – Nov. 2024

- Developed a 2D Angry Birds game using Java and LibGDX, incorporating OOP principles, serialization, and JUnit testing.
- Designed UML diagrams and implemented multi-level gameplay with unique block and pig arrangements.
- Ensured full functionality and consistent behavior across all game levels.

TECHNICAL SKILLS

Languages: C++, Python, Java, HTML, CSS, JavaScript

Frameworks & Libraries: React, Node.js, Flask

Developer Tools: Git, GitHub, VS Code, IntelliJ, PyCharm, Figma, Adobe Illustrator, Adobe Photoshop, Linux/Nginx/PM2

Technical Electives: Data Structures & Algorithms, OOPS, Operating Systems, Database Management System, Network Security, Network Science, Statistical Machine Learning, Visual Design & Communication

AWARDS AND ACHIEVEMENTS

Secured **4th position** at the 54th Youth Parliament.

Awarded **20+ School Level Certificates of Merit** in co-curricular activities.

INTERESTS

Designing, Reading Tech Papers
